Labour Force Survey: Special Report

LABOUR FORCE STATUS - STATISTICAL REGIONS

ORIGINAL SERIES

AUGUST 1996

This special report contains original (unadjusted) estimates of employed persons and unemployed persons for Statistical Regions by State. The estimates are from the ABS Labour Force Survey, and are drawn from a representative sample of over 34,000 dwellings. These series have shown historically a high degree of variability which is inherent in data about smaller labour markets.

The Labour Force Survey is designed primarily to produce reliable National and State estimates. While estimates for Statistical Regions are components of corresponding estimates at the State level, there are no independent population benchmarks at the Statistical Region level. Therefore, Statistical Region estimates will add to the State total, but the individual Statistical Regions will show less stability for any estimate than for a similar estimate at the State level. In addition, estimates (particularly estimates of unemployment) are considerably smaller and are subject to higher relative standard errors.

Care should therefore be taken in the interpretation of regional estimates particularly in the month to month movements.

Standard Errors

Standard errors of the original estimates in this report for the States and Australia can be determined by using the methods described in the Technical Notes in *The Labour Force, Australia* (6203.0). Statistical Region standard errors are available upon request from Don Clark on (06) 252 6525 or from any ABS State office. Very small estimates are subject to high standard errors (relative to the size of the estimate) which can detract seriously from their value for most general uses. Where estimates and percentages have relative standard errors greater than 25%, they have been identified by an asterisk (e.g. *1.0) to indicate that they are subject to high standard errors and should be used with caution.
